

1. Start Anaconda
2. Open Jupyter:

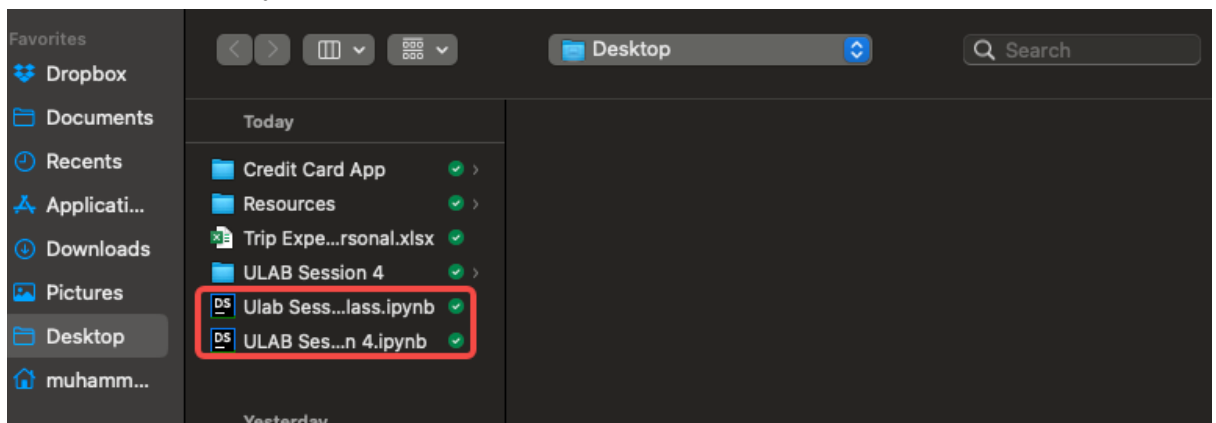

3. You will see the following screen

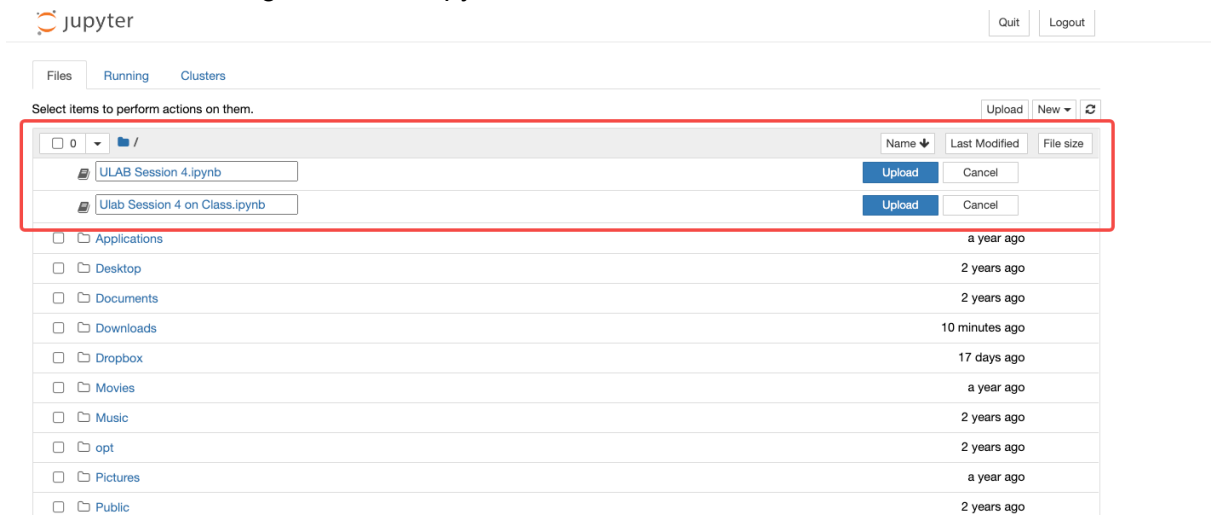

4. Press the upload button on the top right, and choose the files that I have shared in the google drive (make you download the files in your PC or Laptop first)

Chose the files that you have downloaded

Then see them being loaded in Jupyter

- Individually press the upload buttons for both the notebooks, and you will see the following

Files

Running

Clusters

Select items to perform actions on them.

Upload
